2023/24

Information Booklet

Teaching and Learning 2023/2024

When we talk about a 'School Curriculum' we are talking about all of the deliberately planned opportunities for learning. This includes all lessons, clubs, trips and experiences, and the culture and ethos of the school.

Our Curriculum has 3 aims:

Successful Learners

We want all students to feel successful in their learning and to understand how they learn best to help them achieve well within school but also in whatever they do after they have left school.

Confident Individuals

Students who feel successful and who are continually improving in all the subjects they study, and as a person will grow in confidence and be ready to take on whatever the future holds.

Responsible Citizens

We want our students to develop a keen understanding of the world in which they live and to develop the personal and moral values to help them take their place in society as informed citizens who both show respect and are respected by others.

Curriculum Design

We want our lessons to be full of...

Ideas that Inspire the
Imagination

Memorable
Experiences

Ideas that are Relevant
to the Students Lives

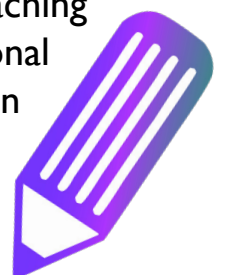

Opportunities that develop
a deep comprehension of a
wide and rich vocabulary

Opportunities that build student skills in
areas that employers seek such as oracy,
creative thinking and problem solving

Teaching and Learning

Within The Salterns Academy Trust our teaching is designed around our Teaching and Learning Principles which we have developed based upon educational research from around the world. Subject teams use these principles when planning sequences of lessons and we want students to understand the purpose of what they are doing in lessons, so there is a student version of these principles that will be displayed in every classroom.

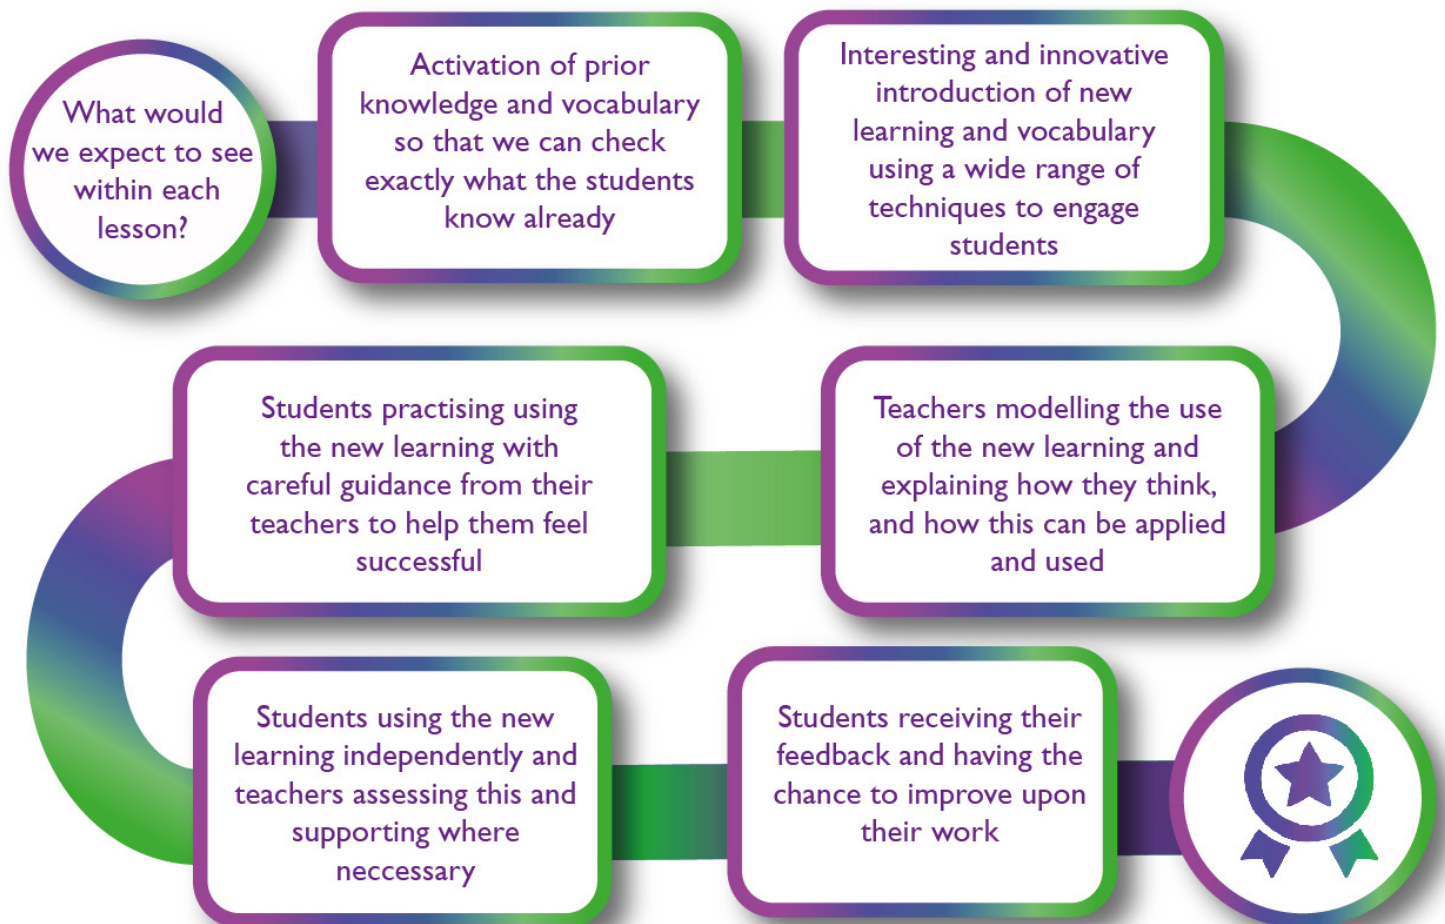

The aim of the teaching and learning principles is to build flexible, long-term knowledge that students will be able to use skillfully in the future.

Teaching & Learning Principles - Teacher Version

How Does This Look Within a Lesson?

Based upon these principles, what we would expect to see within each lesson is:

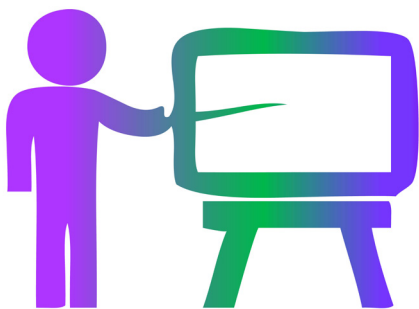

Rationale for 100 Minute Lessons

Help facilitate deeper learning and ensure that there is time to really master the learning within the lesson rather than being rushed

Give time for students to be immersed in a subject and really focus upon this rather than rushing to what's next

Reduce the hectic nature of the day for both students and staff, with students mostly studying 3 subjects a day not 5

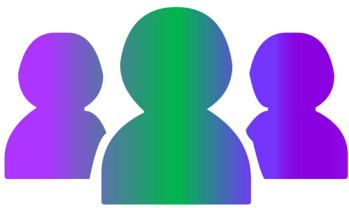

Ensure that in practical lessons there is time to develop the work and not have to stop after they are just getting into it

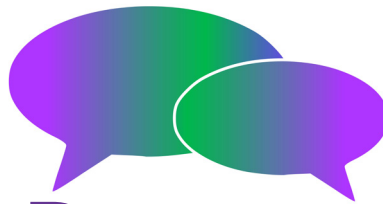

Teacher Planning is 'Central' to the Success of 100 Minute Lessons

The focus in all lessons will be on:

- ▶ Ensuring that in each lesson there is a range of different activities, chunked up into different sections within the lesson
- ▶ Ensuring students understand the purpose of what they are doing and that they see the relevance in what they are learning
- ▶ Making sure that there are opportunities for students to be **actively learning** with more:

Group Work

Discussion
Work

Creative
Learning

Use of
Technology

Games
and Quizzes

Problem Solving
Tasks

The aim of the teaching and learning principles is to build flexible, long-term knowledge that students will be able to use skillfully in the future. This version is catered to students with the use of questions and is displayed in every classroom.
